

At Southwire Company, LLC, the safety and well-being of our employees and customers has always been our primary priority. As an essential business, our products are used to provide power to critical infrastructures across America. During this unprecedented time, we have been working diligently to quickly manufacture and deliver products to critical projects like the building of temporary hospitals in New York and the reconditioning transmission lines in California, as well as many other projects to deliver power during this unprecedented time.

While these critical projects are ongoing, we recognize that many other projects have been put on hold. Now, more than ever before, customers are needing solutions to help get their projects back on track when the time is right. Southwire is here to help with several service and solution options.

Our Southwire Solutions University™ (SSU) is offering several training courses covering a variety of products and solutions that can help improve productivity and safety on the jobsite.

If your project has a unique cable construction, you need less than MOQ, or your project has a tight deadline, our Southwire SPEED™ Services team can review your needs and work to get cable to the jobsite quickly.

And, if social distancing and doing more with less people is your new normal, our Southwire SIMpull Solutions® package can help. Our SIMpull Solutions package offers a variety of cables, tools, and services that make installation easier, so teams are able to work with fewer people, allowing contractors to adhere to current government recommendations regarding the number of people gathered in a single area.

At Southwire, we are here to help with solutions to get you, and America, back up and running again.
