Safety Culture and Safety Climate in Construction: Bridging the Gap between Research and Practice

June 10-11, 2013

Report available at www.cpwr.com

Definitions

Safety Culture = Work as Imagined

Unspoken beliefs, attitudes and values that establish the norms about how safety is done in an organization.

Definitions

Safety Climate = Work as Done

Employees' perceptions of the consistency between what their company says or writes about safety and health (e.g., safety culture) and what is practiced on the job site.

Eight Leading Indicators of Jobsite Safety Climate

1. Demonstrate management commitment
2. Align and integrate safety as a value
3. Ensure accountability at all levels
4. Improve supervisory leadership
5. Empower and involve employees
6. Improve communication
7. Train at all levels
8. Encourage owner/client involvement

Safety Climate Assessment Tool (S-CAT)

Indicator-specific
safety management
activities

Rubric Scale:
Measures safety
climate maturity
for each activity

Safety Climate Assessment Tool (S-CAT)

Demonstrating Management Commitment

Management demonstrates commitment by engaging in the following activities:

1. Being present and visible on the jobsite.
2. Always using safety behaviors and safety practices on the jobsite.
3. Identifying and reducing job hazards.
4. Having processes for corrective action following a safety incident.
5. Compassionately reacting to employee injuries.
6. Reviewing and analyzing safety policies, procedures and trends.

For each item below, carefully read the descriptions in each box going from inattentive all the way to exemplary. Circle the one that best describes management's commitment to that activity.

INATTENTIVE → REACTIVE → COMPLIANT → PROACTIVE → EXEMPLARY

1. In my company, management...	Rarely comes to the actual jobsite.	Only comes to the jobsite after an incident has occurred.	Only comes to the jobsite when required, or makes infrequent visits.	Makes regular visits to the jobsite. Interacts mostly with management.	Frequently visits the jobsite; seeks out interactions with employees.	NA
2. When management is present on the jobsite, they...	Typically act as poor safety role models by breaking regulatory and organizational safety policies and procedures.	Are only concerned with adhering to OSHA regulations and organizational policies and procedures after an employee injury has occurred.	Strictly conform to required OSHA regulations and organizational safety policies and procedures, never more or less.	Demonstrate safety behaviors above and beyond what is required.	Consistently model safety behaviors above and beyond what is required and recognize employees who do the same.	NA
3. In my company, management...	Does not participate in safety audits.	Only participates in safety audits in response to an employee injury or adverse safety event.	Participates in safety audits only when required.	Initiates and actively participates in internal safety audits.	Actively participates in internal safety audits and uses the information for management performance evaluation.	NA
4. In my company, management...	Does not want to know about any safety incident, unless it's a fatality. There are no investigations into incidents or close calls.	Resists taking steps to correct or prevent future incidents. Investigations into incidents or close calls result in punitive action toward employees.	Investigates incidents but not in a "blame-free" manner. Initiates corrective actions that comply with owner or regulatory directives.	Includes employees in both a root cause analysis and helping to come up with solutions to prevent future incidents and foster continued improvements.	Relies on a formalized process for conducting a detailed root cause analysis that reviews both processes and behaviors. Findings are discussed with everyone and preventive solutions are implemented.	NA

Safety Climate Assessment Tool for Small Contractors (S-CAT^{SC})

Indicator-specific
safety management
activities (same as
in S-CAT)

My Company...		Already doing this	Would like to do this	N/A
DEMONSTRATES MANAGEMENT COMMITMENT TO SAFETY	1. Has safety policies and procedures and shares them with all employees			
	2. Includes money in project budgets to implement safety measures (such as purchasing or renting safer tools and equipment, and conducting training)			
	3. Frequently visits jobsites and interacts with employees about safety			
	4. Always obeys safety rules and wears proper personal protective equipment (PPE), such as gloves, hard hats, etc. when on the jobsite			
	5. Provides appropriate PPE for all employees on every jobsite			
	6. Recognizes employees for obeying safety rules and wearing proper PPE on the jobsite			
	7. Identifies and takes steps to correct hazardous situations			
	8. Collects information about and follows up on injuries and incidents with managers, supervisors, and employees			
	9. Helps injured workers so they can return to work			
INDICES	1. Holds regular meetings with employees to discuss safety			

For each activity:
Already doing it
or
Would like to do it

Eight Leading Indicators of Jobsite Safety Climate

1. Demonstrate management commitment
2. Align and integrate safety as a value
3. Ensure accountability at all levels
4. **Improve supervisory leadership**
5. Empower and involve employees
6. Improve communication
7. Train at all levels
8. Encourage owner/client involvement

Foundations for Safety Leadership

Leadership Skills

- Lead by example
- Engage & empower team members
- Actively listen
- Practice 3-way communication
- Develop team members through teaching, coaching and feedback
- Recognize team members for a job well done

Feedback

“In order to be an effective supervisor, skills must be in place to lead the workforce. We are committed to providing those leadership skills to our supervisory staff. This ‘Foundations of Safety Leadership Program’ is an excellent method to do just that. The FSL Program will be made a requirement for all supervision to attend.” ***Environmental Safety and Health Director, Roy Anderson Corp***

“The leadership training has broadened my way of thinking and my way of reacting to issues/problems. We have really gotten these guys into shape. I would say a lot of it has come from this program opening your eyes about how to deal with people... they're all buying into it. It took some of them a little bit of bucking but they're buying into it very well.” ***Foreman***

“I’ve been a safety and health trainer for over 33 years, and I really enjoy teaching the FSL. I think the developers put together a well-designed curriculum including a complete PowerPoint presentation and an excellent, easy-to-follow instructor guide. Students I’ve had in FSL classes have reported enjoying and benefitting from the class, and they say they are looking forward to using the skills when they get back to their jobsites.” ***OSHA Master Trainer***

But What About the Other Seven Indicators?

- ? Demonstrate management commitment
- ? Align and integrate safety as a value
- ? Ensure accountability at all levels
- ✓ Improve supervisory leadership
- ? Empower and involve employees
- ? Improve communication
- ? Train at all levels
- ? Encourage owner/client involvement

Safety Climate – Safety Management Information System (SC-SMIS)

Why We Created the SC-SMIS

Make available an easy-to-use, interactive, web-based system that construction companies, regardless of size or available resources, can use – **at no cost** – to engage in continuous **Safety Climate** and **Safety Management** improvement.

Continuous Safety Management & Safety Climate Improvement

Conduct safety climate assessments

Safety Climate Assessment Options

About the S-CAT

Companies that are further along on their safety climate improvement journey can measure their safety climate maturity across eight leading indicators of jobsite safety climate using the S-CAT.

Safety Climate Maturity Scores - Overall and Across Leading Indicators

The numbers 1-8 in the chart and table below pertain to the eight Safety Climate leading indicators:

1. Demonstrating Management Commitment
2. Aligning and Integrating Safety as a Value
3. Ensuring Accountability at All Levels
4. Improving Supervisory Leadership
5. Empowering and Involving Employees
6. Improving Communication
7. Training at All Levels
8. Encouraging Owner/Client Involvement

The bars in the first chart and the table below show your company's overall average safety climate maturity scores from Indicator(s) 1 to 8 (Example only).

The small horizontal gray lines indicate average scores of other respondents from other construction companies who have taken the S-CAT in the past 18-24 months.

Below that you'll see charts and tables for each of the 8 indicators. The charts show the percent of respondents answering for each level of maturity. The tables show how often each response was chosen (frequency) and the average of those responses for each indicator activity.

Safety management resource repository

Safety Management Resources

The SC-SMIS repository is filled with safety management resources that are currently being used by safety professionals at construction companies to strengthen their jobsite safety climate. Click on the indicator buttons (one at a time) to get a list of resources to preview and download/save. Once you decide which one(s) to use, click on the Develop Action Plan for those resources to start putting it/them into action. [You can also Download a Blank Action Plan Template.](#)

CONTRACTOR PREQUALIFICATION POLICY AND APPLICATION

PURPOSE
This policy ensures we hire only those contractors committed to working safely and who offer minimal risk from a financial and business operations standpoint.

A. Prequalification is based upon:

- a. The contractor's demonstrated safety performance
- b. The contractor's ability to manage an effective safety program

B. The Prequalification application asks for supporting information on the following:

- a. Safety statistics
- b. Safety program and training content

PRE-QUALIFICATION REQUIREMENTS

- All contractors with a contract amount of \$500K or greater to provide labor must complete a pre-qualification application that will be used by [COMPANY NAME] to determine hiring.
- A "Letter of Exception" (LOE) process is intended to be a last resort option considered for those not meeting our basic criteria. This process is explained later in this document.
- Contractors with contract amounts of \$500K or greater that do not meet our safety criteria would also require a LOE.
- All contractors are required to pre-qualify on an annual, rolling calendar year basis. Pre-qualification date will be the date all information in the pre-qualification package is complete and the contractor is fully qualified through the pre-qualification package review or LOE.

Safety Climate — Safety Management Information System

Here is a sample email you can use/modify inviting employees to participate in the S-CAT. Remember to keep the unique URL as is.

***Note – [Click here](#) to see options for employees who don't have access to email.**

Target Group: Arlington Homes – Silver Spring – Field

Dear valued employee,

Arlington Homes needs your valuable input and feedback so we can continue to improve the safety climate on your jobsites.

We're asking our employees to spend approximately 20 minutes taking the S-CAT survey that was developed by CPWR – The Center for Construction Research and Training (www.cpwrr.com). You can answer the questions using a mobile device, tablet, or desktop computer.

Employee answers are completely anonymous and cannot be linked back to an individual. The computer program will combine all of the responses together in a large database and no one at Arlington Homes will have access to the database.

To take the S-CAT please click on this link
<https://www.scsmis.com/survey/take/PeXD6v0q13PElrmj> before [END DATE].

Thank you for taking the time to help keep your jobsites safe!

CEO, Safety Director, etc.

Take the S-CAT

Sample S-CAT Item

The screenshot shows a web-based assessment interface. At the top, there is a navigation bar with a 'Back' button, a progress indicator showing '24%' completion, and a 'Next' button. Below this, the 'Activity' is described: 'Safety is integrated into organizational policies and procedures.' The main section is titled 'In my company...' and contains six selectable options arranged in a 2x3 grid. The top-right option, 'Safety is only integrated to the point of meeting minimum OSHA requirements.', is highlighted in orange, indicating it is the selected answer. A red arrow points to the 'Next' button in the top bar, and another red arrow points to the selected option. A red bracket on the left side of the grid highlights the entire set of options. At the bottom of the interface, there is a 'Cancel' button on the left and 'Back' and 'Next' buttons on the right.

← Back 24% Next →

Activity: Safety is integrated into organizational policies and procedures.

In my company...

Safety is not integrated within organizational policies/procedures.	Safety is not valued or enforced when management, OSHA, or safety professionals are not present.	Safety is only integrated to the point of meeting minimum OSHA requirements.
Safety language is formally integrated into most policies and procedures.	Safety is formally and informally integrated into all policies and procedures.	Not Applicable

Testimonials

“For what a contractor would expect to pay for a comprehensive safety climate evaluation and mitigation plan, the ‘Safety Climate-Safety Management Information System’ is a valuable tool available for all. As a mid-size general contractor, we have been able to supplement our own systems and approaches with industry-tested, scientifically-backed resources and enhance our organization’s overall safety program.” *(Medium-sized General Contractor, Washington State)*

Testimonials

“... I showed the graphs and stats to our project managers and supervisors to help decide which areas to work on and then downloaded many of the excellent safety management resources in the repository to target them. What’s great about the resources is we didn’t have to start from scratch or reinvent the wheel and can just tailor them for our company. I plan to use the SC-SMIS on an on-going basis to keep us on track.” *(Small Specialty Subcontractor, Connecticut)*

Testimonials

“I think the SC-SMIS is a great resource, and I have found great information in the S-CAT to help formulate FY strategic and tactical objectives. I think that the Action Planning feature would be a great tool for companies that currently do not develop annual strategic goals and objectives.” *(Medium-size General Contractor, Ohio)*

Testimonials

“I feel that the SC-SMIS tool provides valuable comparative data to help hone safety culture growth regardless of company size, and I will continue to advocate for *[it's]* use within our company. I do firmly feel that the tool will be very useful, particularly to companies without well-developed internal resources.” *(Medium-size Specialty Subcontractor, Indiana)*
